

- What do I want to learn or understand better?

My current objective is to develop a thorough understanding of the entire process of an agile software project, from beginning to completion. This area of study has not been extensively covered in any of the programming courses I have taken, which have generally provided a set template and predetermined code to work with. Although I anticipate encountering challenges, I am excited about taking on this challenge. I am convinced that there is still much for me to learn about agile, which will therefore be a primary focus for me in the upcoming week. Additionally, I hope to develop my leadership skills and ability to work with stakeholders.

- How can I help someone else, or the entire team, to learn something new?

Currently, I feel like I have nothing to teach the members of my group in this project. However, I have observed that certain team members possess good skills in using Trello and Github, and I will seek to learn as much as possible from them throughout the whole course. Additionally, some members of the group appear to be highly skilled programmers, and I will aim to take in as much knowledge and expertise from them as possible.

- What is my contribution towards the team's use of Scrum?

During our initial meeting, I wanted to remain fully committed to the Scrum framework. Going forward, as my understanding of Scrum gets better, I will try to implement it more fully in our project work, with the goal of enabling the team to adopt this methodology more effectively.

- What is my contribution towards the team's deliveries?

Thus far, my contributions have included securing a stakeholder and a project for our group to work on during the course. I have been active in our group chat, helping to facilitate meetings and establish early momentum to get the ball rolling. Additionally, I have actively participated during meetings, with the ultimate aim of ensuring that our deliverables are completed and submitted before deadlines.
