

Individual Reflection

What do I want to learn or understand better? Consider e.g., teamwork, Scrum, agile processes, technologies etc.?

The MVP. When is our project classified as a MVP.

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I have been pushing for more documentation so that you can understand other team members code better.

I have also organized our code in correct folders and such to make it easier to find everything.

Changes/improvements from last week's reflection?

Now I am back with front end development working solo which has been very different. It is a bit more effective when coding because there is less need for communication. It is however more difficult when you are not liable to anyone else and additionally it is nice to have a teammate to discuss things with and to get new ideas.
