

# Individual Reflection

**What do I want to learn or understand better? Consider e.g., teamwork, Scrum, agile processes, technologies etc.?**

How to effectively work in a team while writing code. We started out by working in pairs and simply having one person code whilst the other becomes almost a spectator. This sprint we extended to groups of three and this way of working became impossible so we started using a live coding plug-in so that all three can write code in the same version of our sub-team's branch. This solution has worked fine so far.

How to better communicate about other group members work so that a high-level understanding of the product can be maintained.

**What is my contribution towards the team's deliveries? How can I help my team do better next sprint?**

Since our group, and especially I, have only a limited understanding of web development I have spent a lot of time on studying the subject. I have therefor tried to share any useful resources that I come across and tried to explain useful concepts that I have learned to my team.

**Changes/improvements from last week's reflection?**

I have taken time to improve my understanding of web development and I felt that this had a significant impact on my ability to deliver to our team's performance.

I have also tried my best to make time for meetings and working sessions by scheduling in advance and in accordance with the schedule of my other team members to make more time for meetings.
