

Individual Reflection

What do I want to learn or understand better? Consider e.g., teamwork, Scrum, agile processes, technologies etc.?

How can I as scrum master fill my tasks whilst working in a sub-team within the team? The issue is that when we divide our group into sub-groups it is quite difficult to communicate with other sub-groups.

How to stay on course in the project and not get sidelined on new additional features.

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I think that I bring some resources and guides on how to do stuff in web development.

I also try to push to get things done and have as many sit-downs or meetings as possible.

Changes/improvements from last week's reflection?

I switched from front end work to back end. This has given me a better understanding of their coupling and how the website will function. I did take me some time to understand how everything had been written so far but I think it was worth it.

This week we tried to avoid working in sub-groups of 3 as this seems less efficient and fewer user stories can be worked on at the same time.

I have also tried my best to make time for meetings and working sessions by scheduling in advance and in accordance with the schedule of my other team members to make more time for meetings.
