Individual Reflection

What do I want to learn or understand better? Consider e.g., teamwork, Scrum, agile processes, technologies etc.?

Writing user stories. I think it is quite difficult to narrow down user stories to an acceptable level which still allows for strategic thinking. I think that a big risk is that user stories become too feature oriented and that the initial code might be unaligned with the goal of the entire project.

I also wish to learn a lot more of web development. This sprint we mainly focus on front-end to get our MVP ready and I am entering this project with very little knowledge of working with React.

What is my contribution towards the team's deliveries? How can I help my team do better next sprint?

I believe that I have actively participated in the meetings apart from the week when I was home with the flu. I think that it is important to get momentum early on in this project and therefor I will try to reply as quickly as possible in our group chat and check slack regularly for any messages there.

Sharing any useful resources that I come across with my teammates as it is likely that we will run in to similar problems. This could be resources for learning about specific things in web development or more general concept but also tools that can be useful for this.

Learn as much as I can about web development with React so that I can participle in writing the user stories more and the strategic thinking.

Changes/improvements from last week's reflection?

None
